### Premier Moulding Machinery Now Offering ‘Haitian by Sepro’ Robots in Packages with Haitian IMMs in the United Kingdom

#### **Premier Moulding Machinery (PMM) Now Offering ‘Haitian by Sepro’ Robots in Packages with Haitian IMMs in the United Kingdom.**

Plastics processors in the United Kingdom can now buy Haitian and Zhafir injection-molding machines prepackaged with ‘Haitian by Sepro’ robots. PMM, Quainton, Aylesbury (UK), will distribute the packages.

The new offering is made possible by an agreement between Sepro Group (La Roche-sur-Yon, France) and Haitian International Germany, which oversees the company’s business in the United Kingdom. The agreement allows Haitian to meet increasing demand for robot/IMM packages with 3- and 5-axis robots built by Sepro and Haitian and Zhafir molding machines sold in Europe. All robots will have a user interface based on Sepro’s Visual control platform that is fully integrated and accessible from the IMM operator interface. PMM’s team will handle robot service after training by Sepro.

#### **Unified platform**

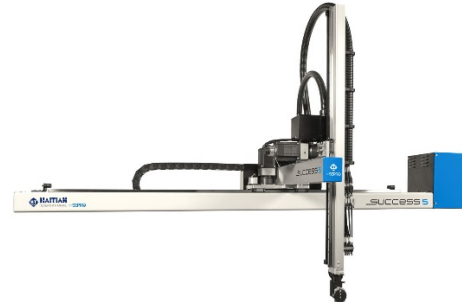

Sepro uses a single, unified control platform, called Visual, to simplify programming and operation of its entire portfolio, which includes 3- and 5-axis Cartesian robots and 6-axis robots. In integrated “Haitian by Sepro” package solutions, robot control is integrated into the machine control so that the machine operator has access to all basic settings and robot data directly on the IMM control panel in Open Integration.

#### **A new step in the expansion of Sepro’s activities in the United Kingdom**

Glen EVES, General Manager, Sepro UK: *"I am very happy to work closely with our new partner, in order to enhance our footprint in the UK. We are excited by our common business perspectives."*

*Carl Reeve, Managing Director PMM, and Jean-Michel Renaudeau, Managing Director Sepro Group*

*The Haitian by Sepro Success range of robots includes five different sizes to serve molding machines from 20 to 700 tons. These universal general-purpose robots bring 3-axis servo speed and accuracy to simple pick-and-place and stacking applications.*
